Inspection Memo
to Coal File

RE: Tower Resources, Inc.
Coal Exploration
CEP/007/019
Carbon County, Utah

On July 7, 1983, an inspection of Tower Resources, Inc. coal exploration sites was conducted by Barton Kale of the Division accompanied by Allen Emmel of the above-mentioned concern.

Upon arrival, the inspector was informed by Mike Glasson (Senior Geologist with the mine) that the holes were drilled. During mining, the operation ran into problem material and they needed these exploration sites to determine the extent of the problem and how to route the shaft. As the plans for these sites were being developed, the operation was able to circumvent the problem, eliminating the immediate need to drill. The sites remain approved, to be drilled when the need is justified.

Upon inspection of the potential sites, no development was observed at either site. The road is developed, but should be part of a BLM right-of-way. The road is being developed by unknown concerns past the sites of the proposed drilling area. The BLM will be contacted concerning this.
